报告题目：2026 教育部实验室前沿数学论坛报告(四):
Dichotomies and Admissibility

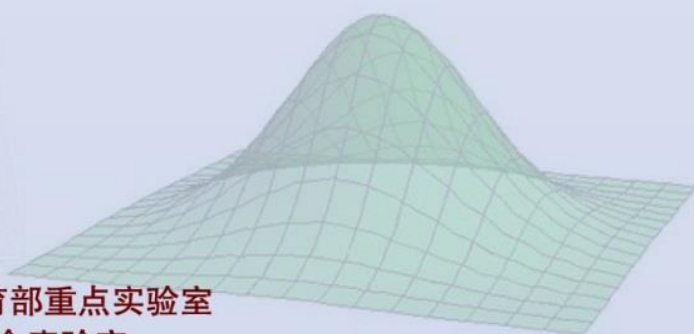

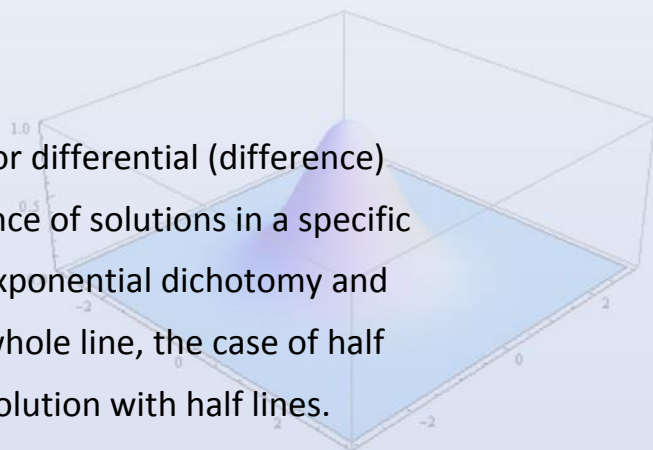

报告人：张伟年 (四川大学)

时间：2026-09-24 星期四 11:45-12:30

地点：上海数学中心106室

报告摘要：

Exponential dichotomy describes hyperbolicity for differential (difference) equations. Admissibility is concerning the existence of solutions in a specific class. In this talk we give relationship between exponential dichotomy and admissibility in the case of whole solution with whole line, the case of half solutions with half lines, and the case of whole solution with half lines.
